14.# This is the default, if you make this bigger yum won't see if the
metadata
15.# is newer on the remote and so you'll "gain" the bandwidth of not having
to
16.# download the new metadata and "pay" for it by yum not having correct
17.# information.
18.# It is esp. important, to have correct metadata, for distributions like
19.# Fedora which don't keep old packages around. If you don't like this
checking
20.# interupting your command line usage, it's much better to have something
21.# manually check the metadata once an hour (yum-updatesd will do this).
22.# metadata_expire=90m
23.# PUT YOUR REPOS HERE or IN separate files named file.repo
24.# in /etc/yum.repos.d
